Dear Participant,

Congratulations on successfully completing 14 weeks of lectures in Cohort 10! 🎉

Welcome to Week 15 of TRI AI Saturdays Cohort 10! 🚀

With the lecture phase now complete, the next step is to focus on finalising your team project and preparing for the project evaluation and Demo Day.

Please take note of the key dates and submission requirements below.

Key Date

Date	Milestone
9 September	Project development phase on competition page closes
9-12 September	Evaluation on the unseen test set
12 September	Github project link & documentation due
16 September	Top teams selected and notified
26 September	Presentation slides due
27 September - 2 October	Demo practice with your mentor
3 October	Demo Day

1. Development Phase

- **Wednesday, 9 September:** Competition development phase closes.
- **9–12 September:** Projects will be evaluated on an unseen test dataset. This dataset was not available during the development phase.

2. Final Project Submission — 12 September

By **12 September**, each team must submit **one GitHub repository link** containing the complete project and all four Cohort Challenges.

Your project must be submitted as a **public GitHub repository** containing the following:

- 1. README.md** — maximum **6,000 characters** (references excluded), covering:
 - **Dataset:** Describe the data you used and how it was selected or created.
 - **Training Pipeline:** Describe data collection, preprocessing, hyperparameter search, and key model/design choices.
 - **Evaluation:** Explain how you tested and verified your method.
 - **Reproduction:** Provide clear instructions on which scripts to run and in what order.
 - **Appendix:** Include a list of contributors/team members and mentors.
- 2. Code**
 - Include all code required to reproduce your results from scratch.
- 3. Data**
 - Include the dataset if size and licensing allow. Otherwise, provide scripts or instructions for automatically downloading or loading the data.

Submission Form:

The GitHub repository link must be submitted by **12 September** to allow us to **complete the evaluation and select the top teams**.

Form for Submission: <https://forms.gle/2Vx1iyn2hdcUZR7dA>

Teams can use the following repository as an example:

<https://github.com/AISaturdaysLagos/C9-team-nwapa>

3. Repository Structure

The repository should contain all required project materials and follow a clear, organised structure. For example:

4. All 4 Cohort Challenges

All 4 Cohort Challenges must be included in the GitHub repository. These challenges were completed throughout the different modules, starting with "Develop Your Problem Statement" in Course 1. The **docs/** folder must contain:

1. Problem Statement – [problem_statement.pdf](#)
2. Data Card – [data_card.pdf](#)
3. Impact Statement Card – [impact_statement_card.pdf](#)
4. Stakeholder Engagement – [stakeholder_engagement.pdf](#)

5. Project Code & Scripts

- Include all project scripts and relevant code in the GitHub repository.
- The code should be clearly organised, for example in a **scripts/** or **src/** folder.
- The code submitted to GitHub must match the final submission made on Kaggle/CodaBench.
- Please ensure that the repository contains all relevant files needed to understand the project and reproduce the final submission.

6. What Happens After the Final Submission? After the final submission:

- **16 September:** Top teams will be selected and notified.
- **26 September:** Selected teams will submit their presentation slides.
- **27 September – 2 October:** Selected teams will practise their demos with their mentors.
- **3 October:** Demo Day.

You can find the complete project requirements and details here: https://aisaturdayslagos.github.io/cohort_structure/cohort10/projects.html

Thank you for your consistency and commitment throughout the course. As you move into the final stage, stay focused, work closely with your team, and finish strong. We look forward to seeing what you've built.

7 September 2026 at 19:54

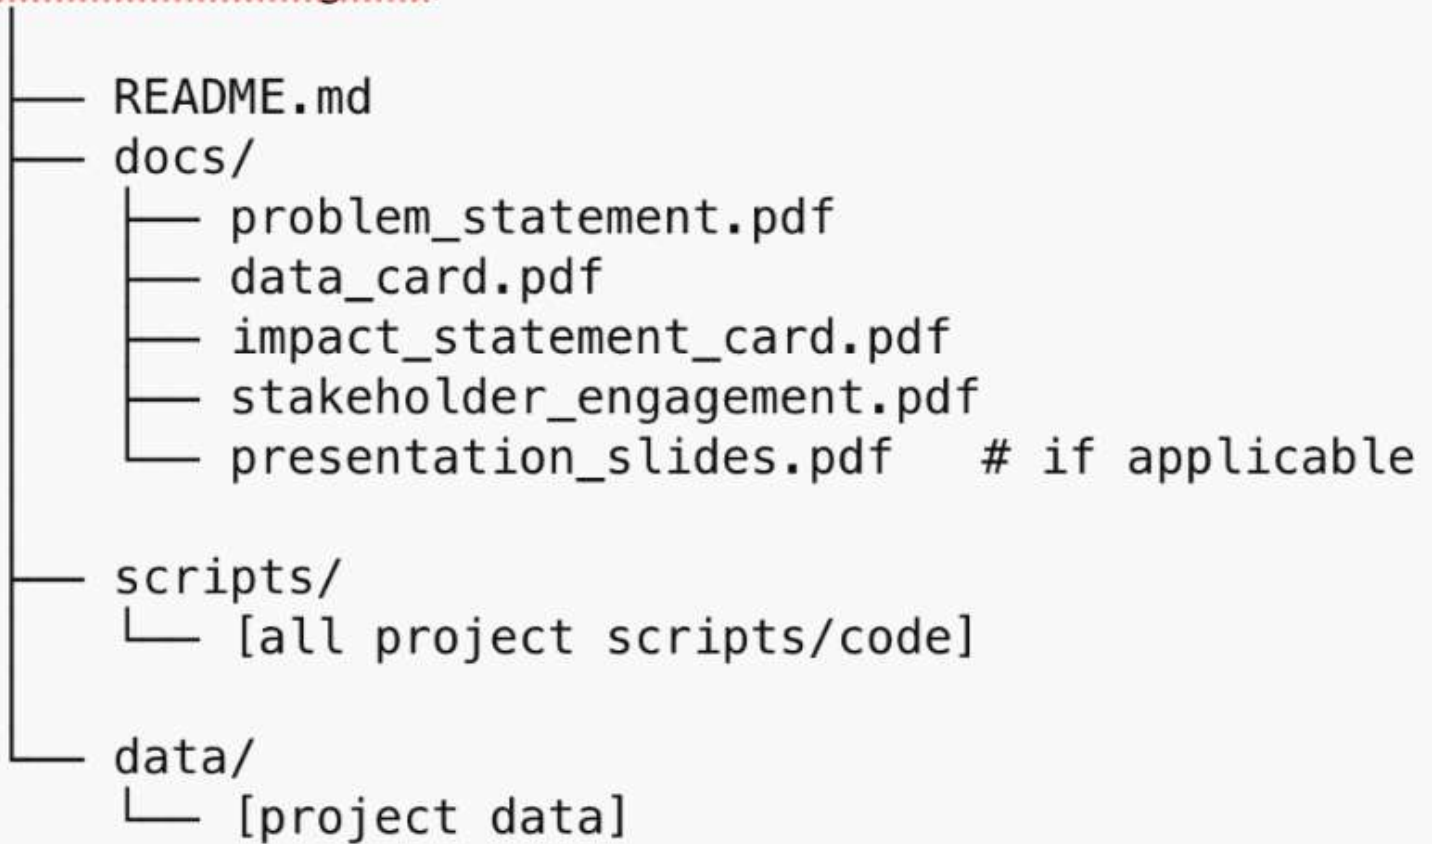

Hi all,

For those of you who have already sent in their GitHub link - nice work.

I wanted to quickly share an important note. Please make sure that your repository follows the following naming convention "C10-team-name". See example screenshot below.

Also make sure that all the cohort challenges are present in a doc/ folder and you exactly follow the instructions in the email above regarding what your README.md file should cover.

C10-team-kagera/

It's important to note that failure to follow this might lead to a delay in reviewing your teams work.

Lastly, please only submit ONE repository per team.

All the best and looking forward to reading about your approach to solving the problem.

Tejumade Afonja

Co-founder and Director of Programmes
